

Remarkable II

It's nice to meet you

Digital world

I am George and in this article you will read about Remarkable 2. Here you can learn new ways to get organized and how to deal with your notes, or your daily life. I hope you find it as a source of inspiration and feel free to share with your friends.

What is Remarkable?

The next generation paper is remarkable. We live in a world where technology is constantly evolving and bringing the world closer to a better way of life.

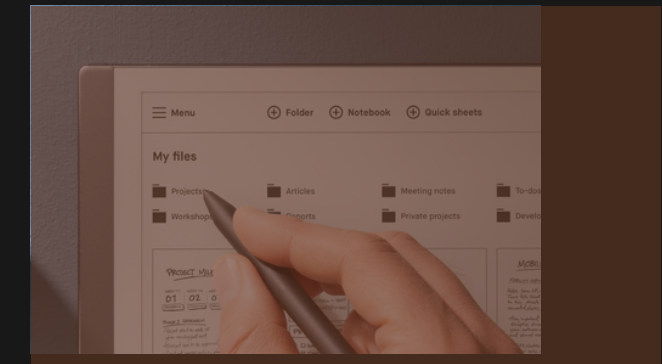

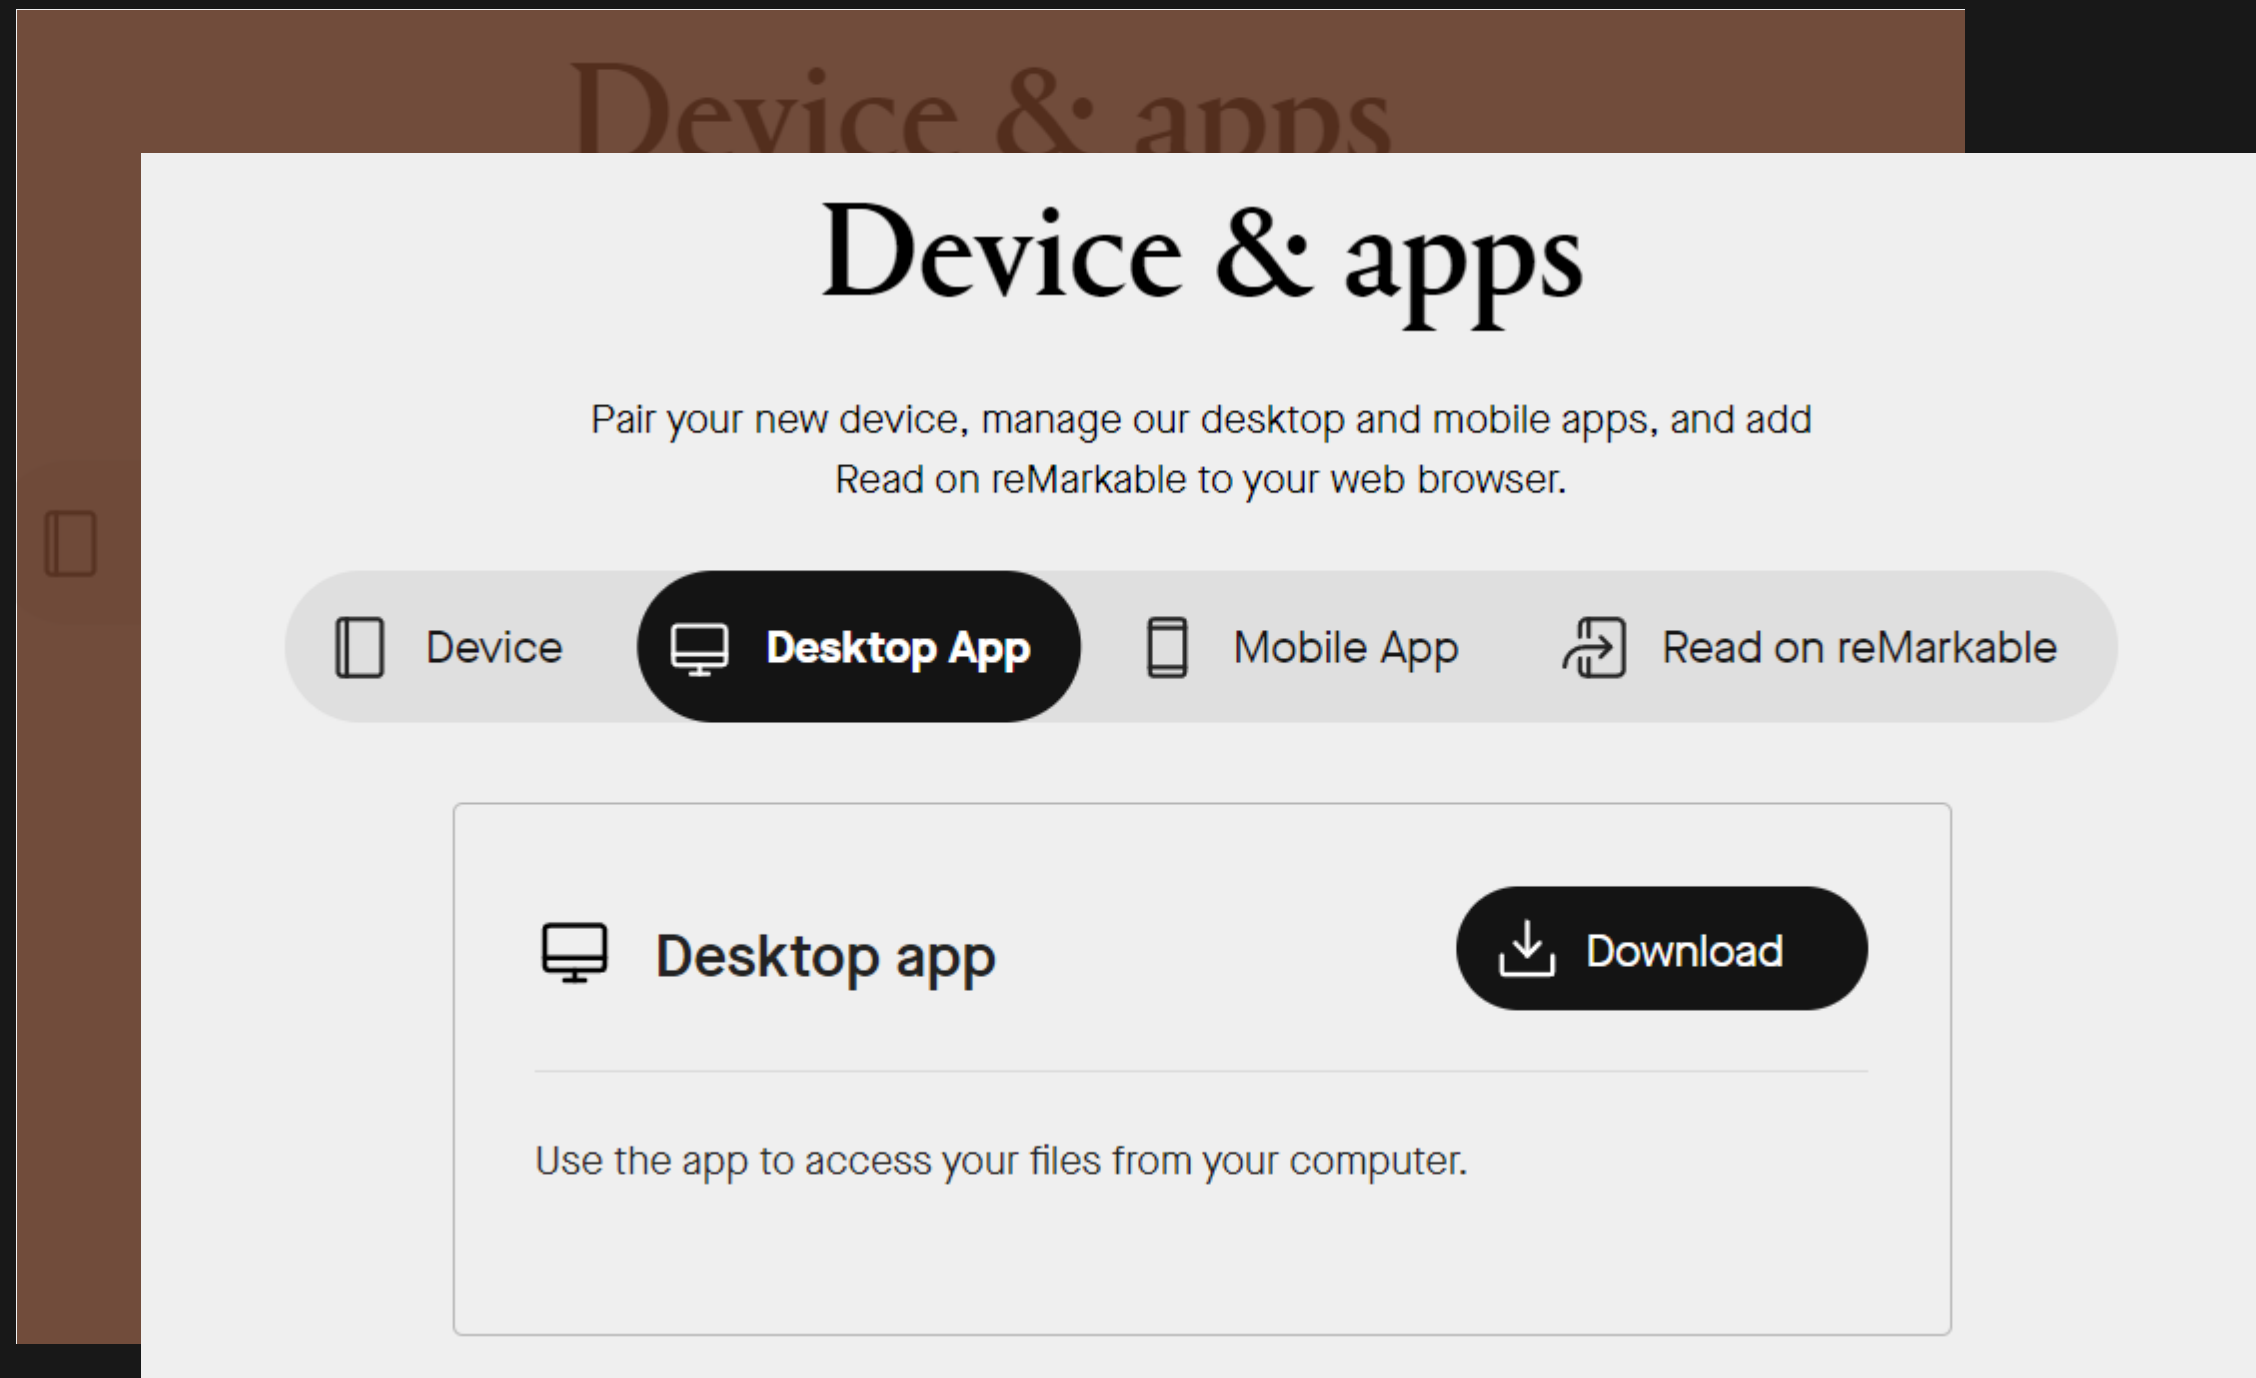

Is a digital notebook that quickly approaches paper. This is for anyone who takes notes on a daily basis, so you can save real paper and organize everything digitally in a 4.7mm thick paper tablet. You can use it to read PDFs and presentations, take notes on lectures, project your notes on your laptop, convert every note into PDF, use it as a planner, and carry it around with you. Remarkable can reduce:

- forest deforestation because you don't have to use real paper
- eye problems because there is no brightness
- headaches from notifications because you don't receive anything from apps

and it gives you the feel of real paper. Last but not least, the best feature is the battery life.

How to download the Remarkable app

First, you have to create a Remarkable account [here](#), and then it will take you to the site where you can download the app. This website introduces you to all the features that remarkable has:

Keep everything organized without any paper, pencil case, or big backpack.

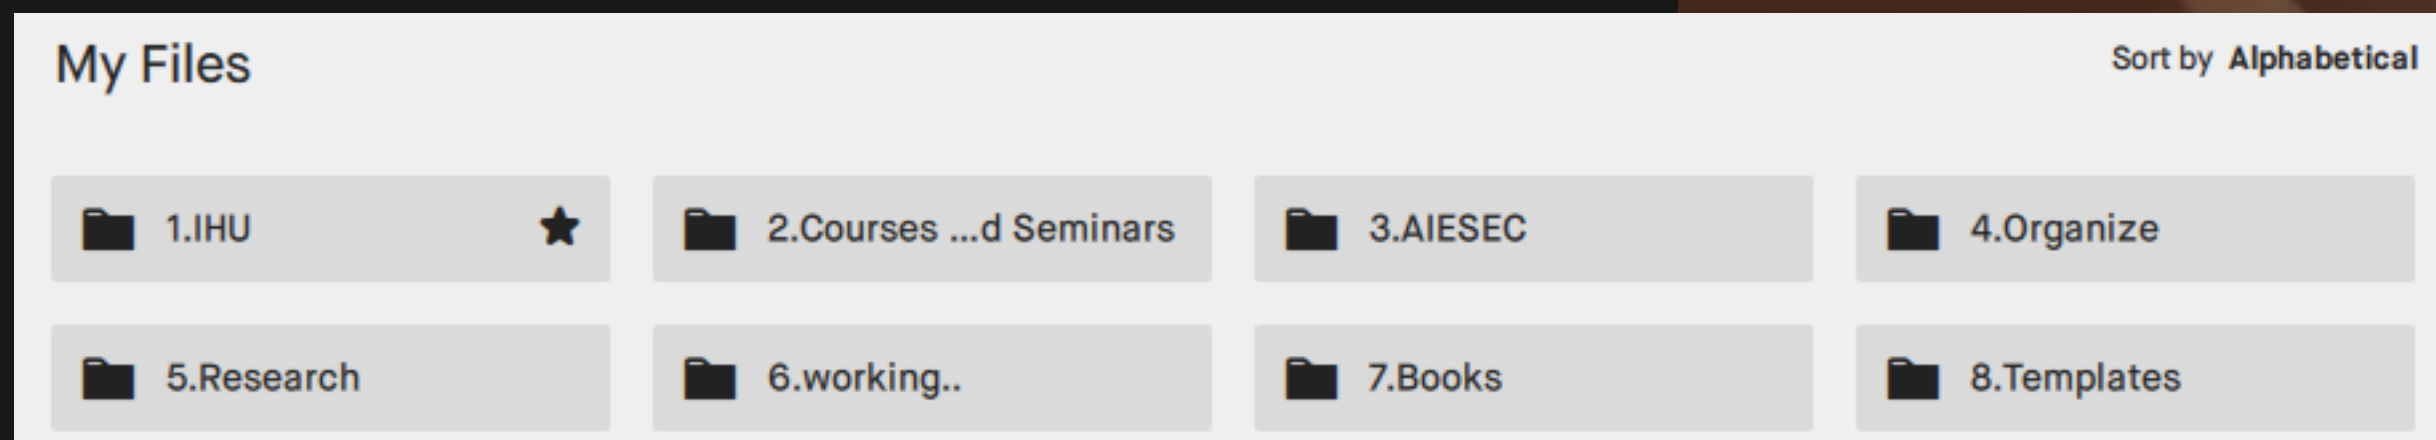

Organize files on Remarkable

You can use two ways to organize your files on Remarkable.

The first one is from the application on your laptop. When you open the program will see to the right top corner these three icons. You can create a folder by the first one:

Friendly advice, you can put a number in front of every folder so your folders can get into a right structure, and then chose the sort by alphabetical:

Organize files on Remarkable

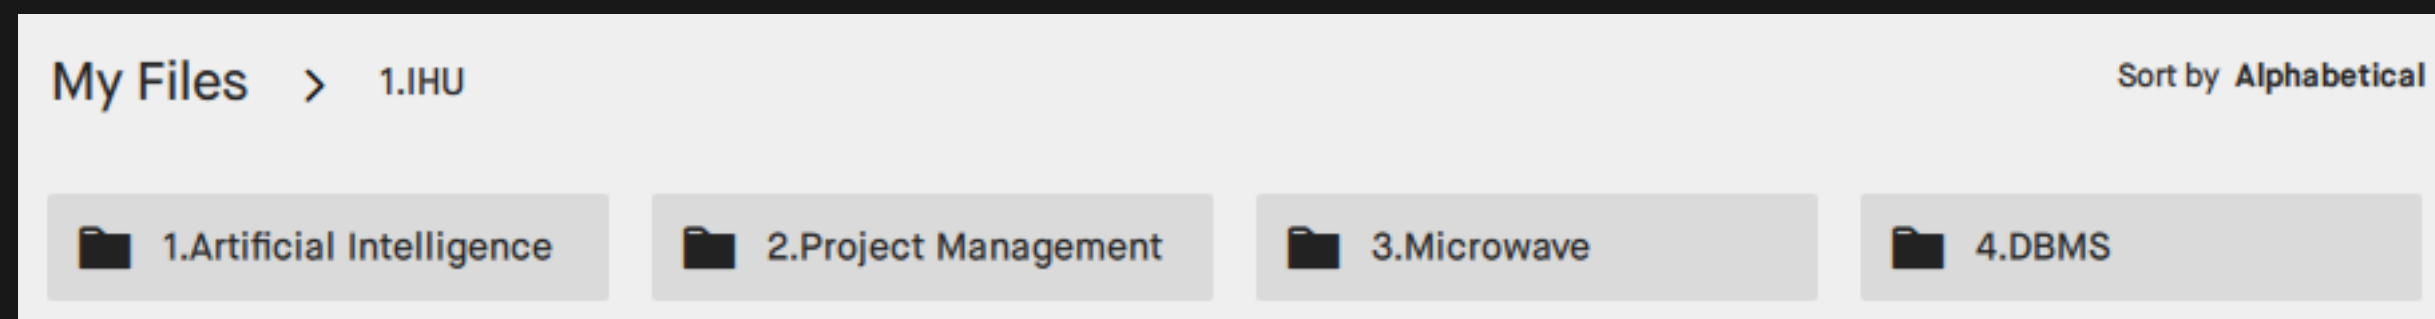

The second way can be from Remarkable.

When you open remarkable you can see the main screen at the top of the three icons. The first icon lets you create a folder, so you can do the same as shown below about the organized structure:

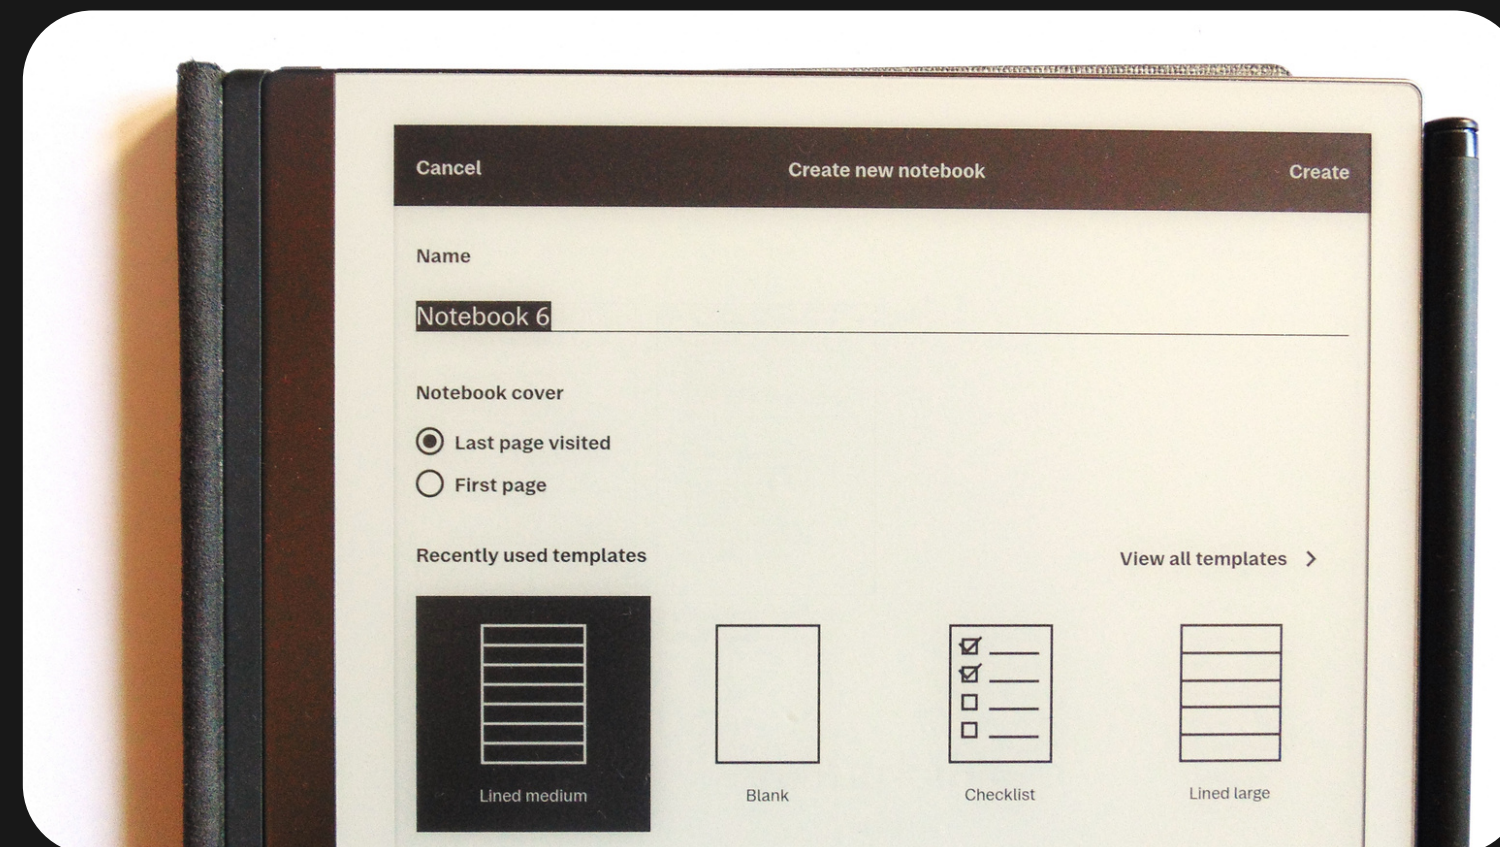

How do I organize my files

I can talk about my main folder which I use every day. My first file as you can see on page 5 is IHU - my university - and it helps me to organize everything, to study well:

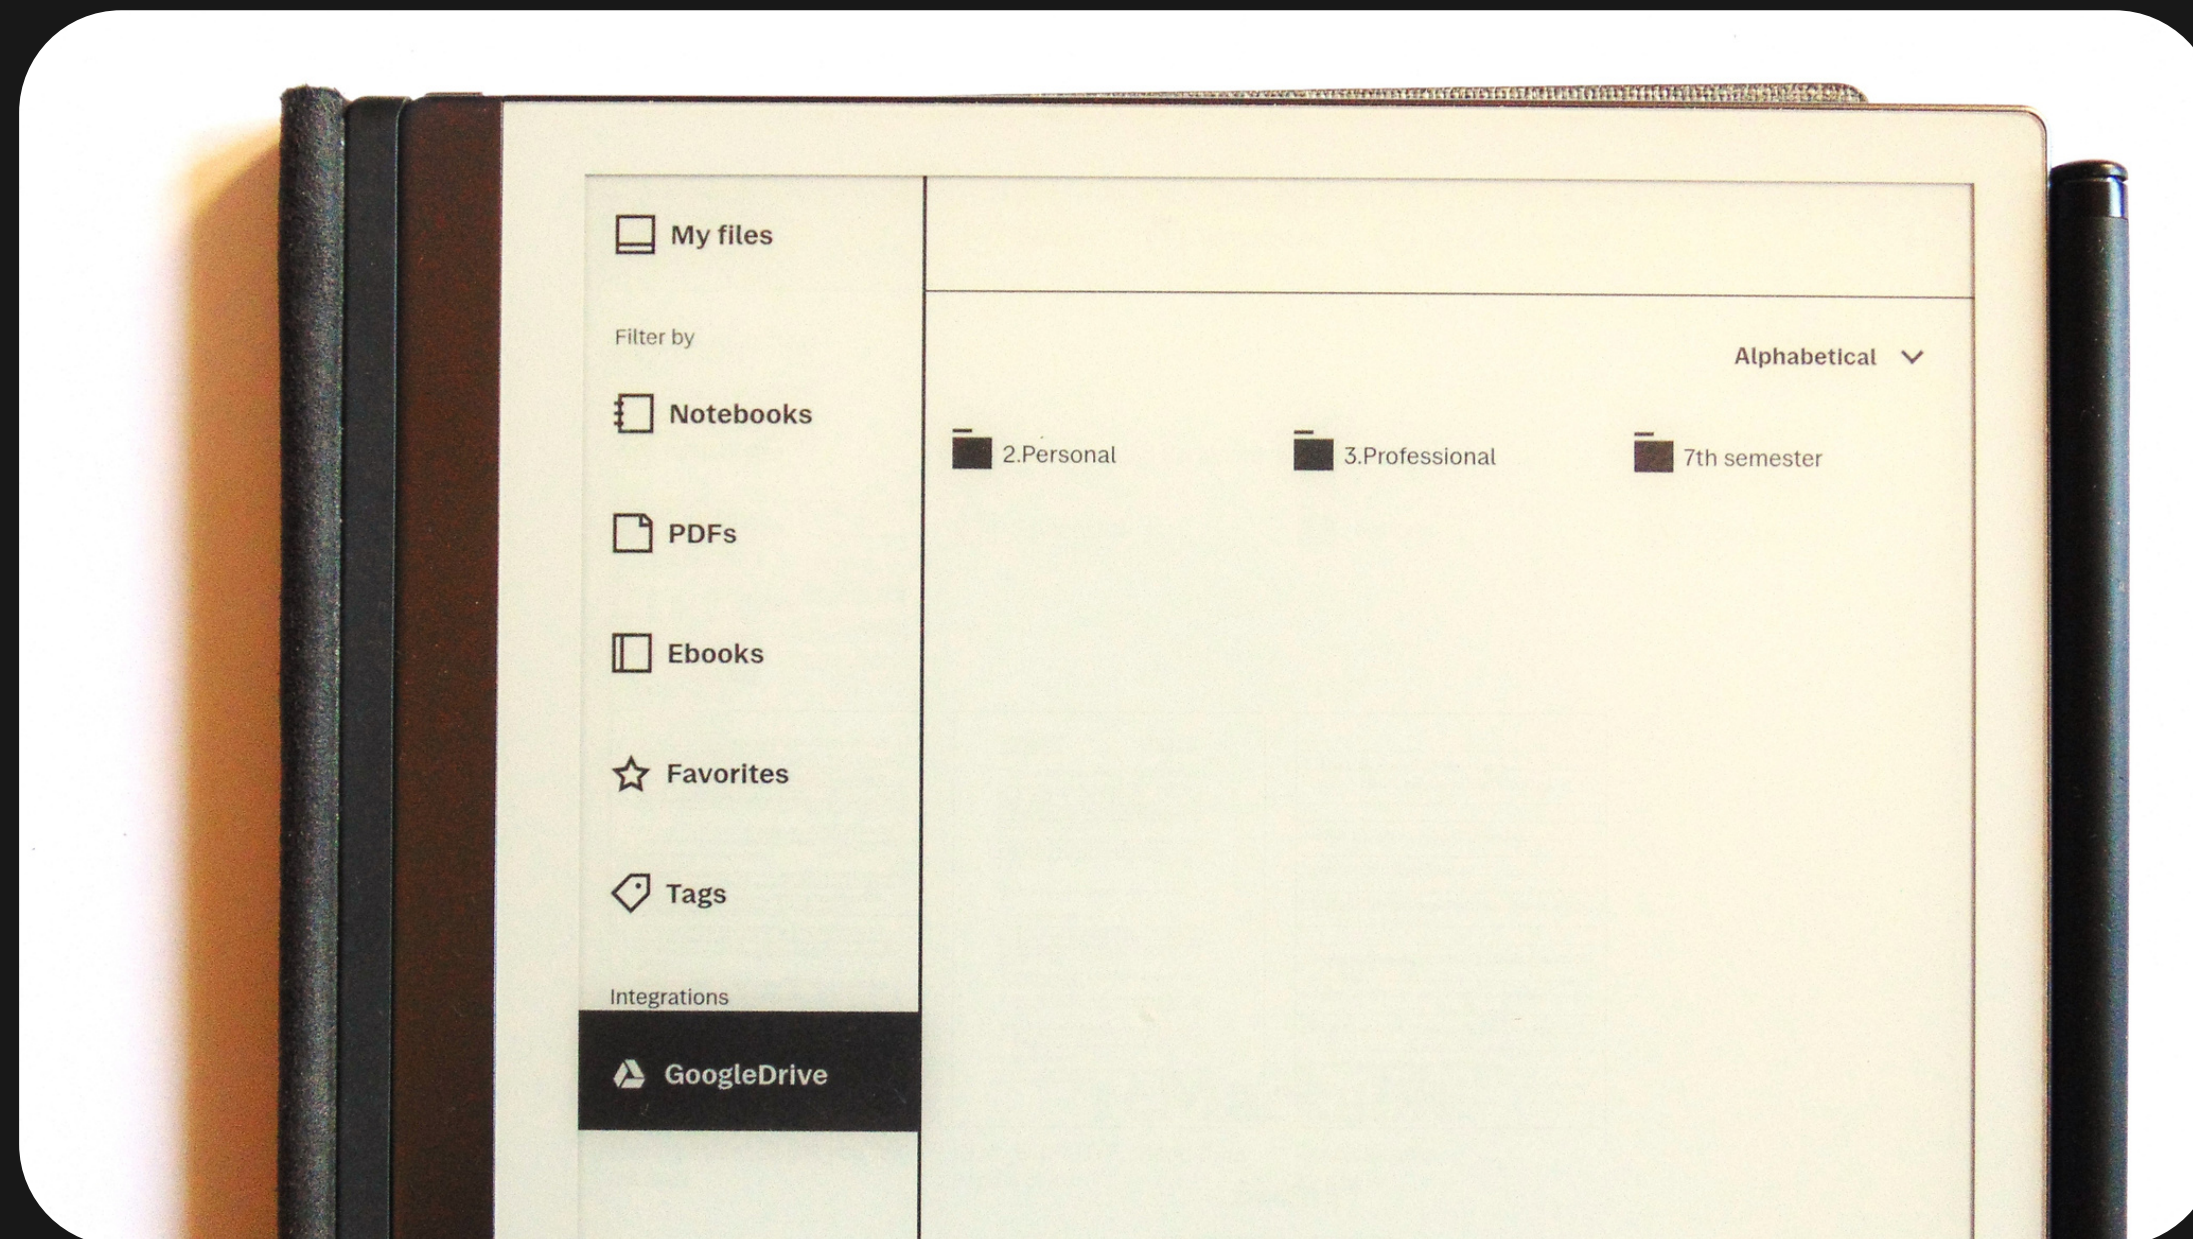

In each folder, I upload every lecture, exercise, or even create notes. To create notes, simply you just have to tap on the second icon in the corresponding folder and also you can choose a template:

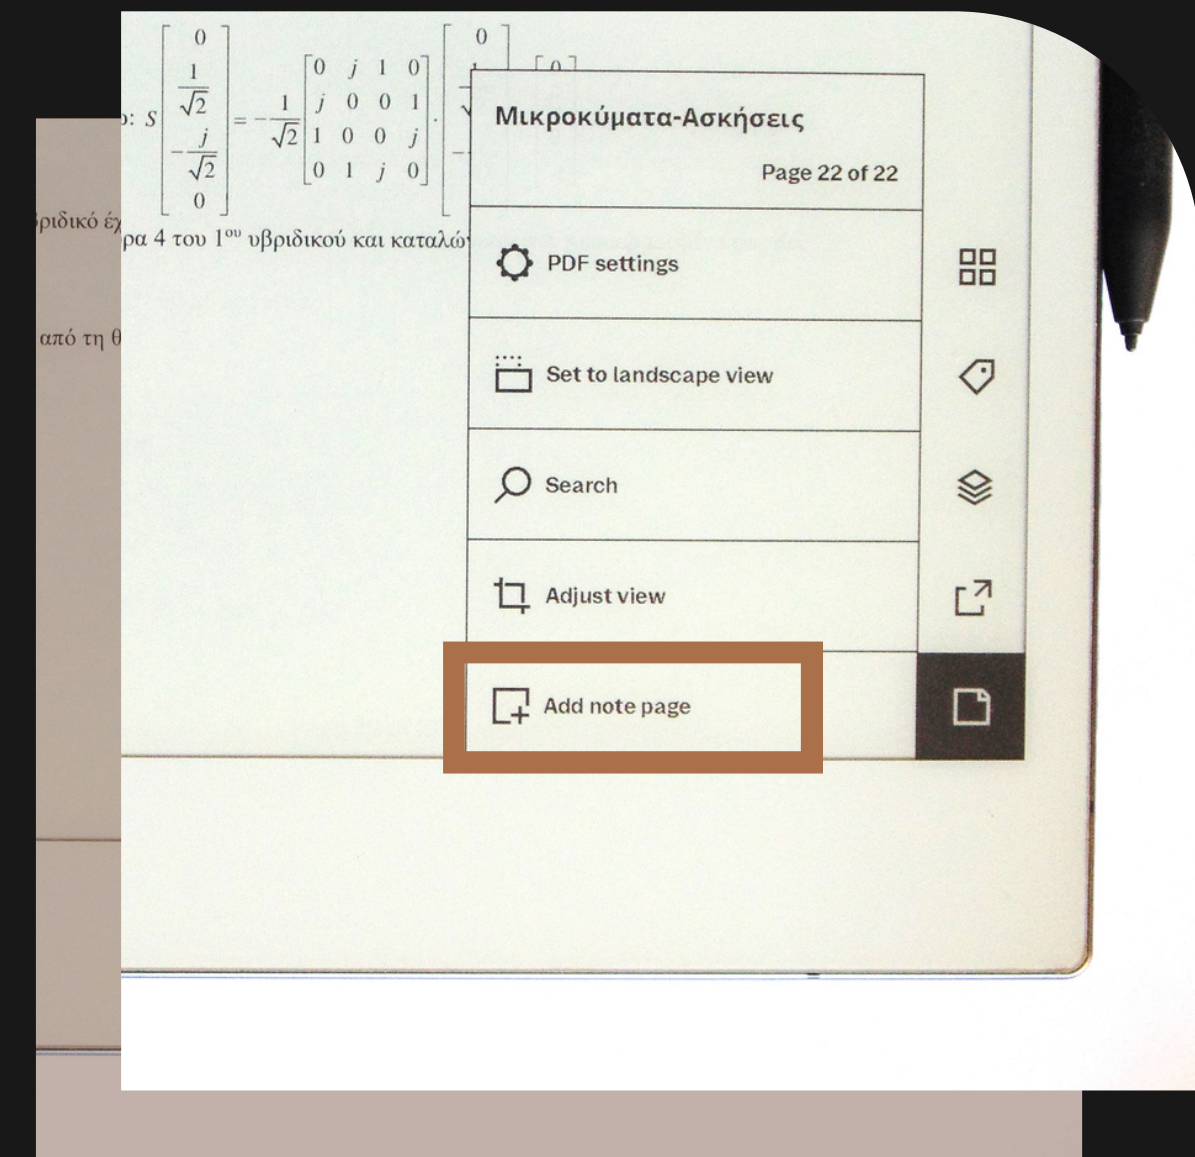

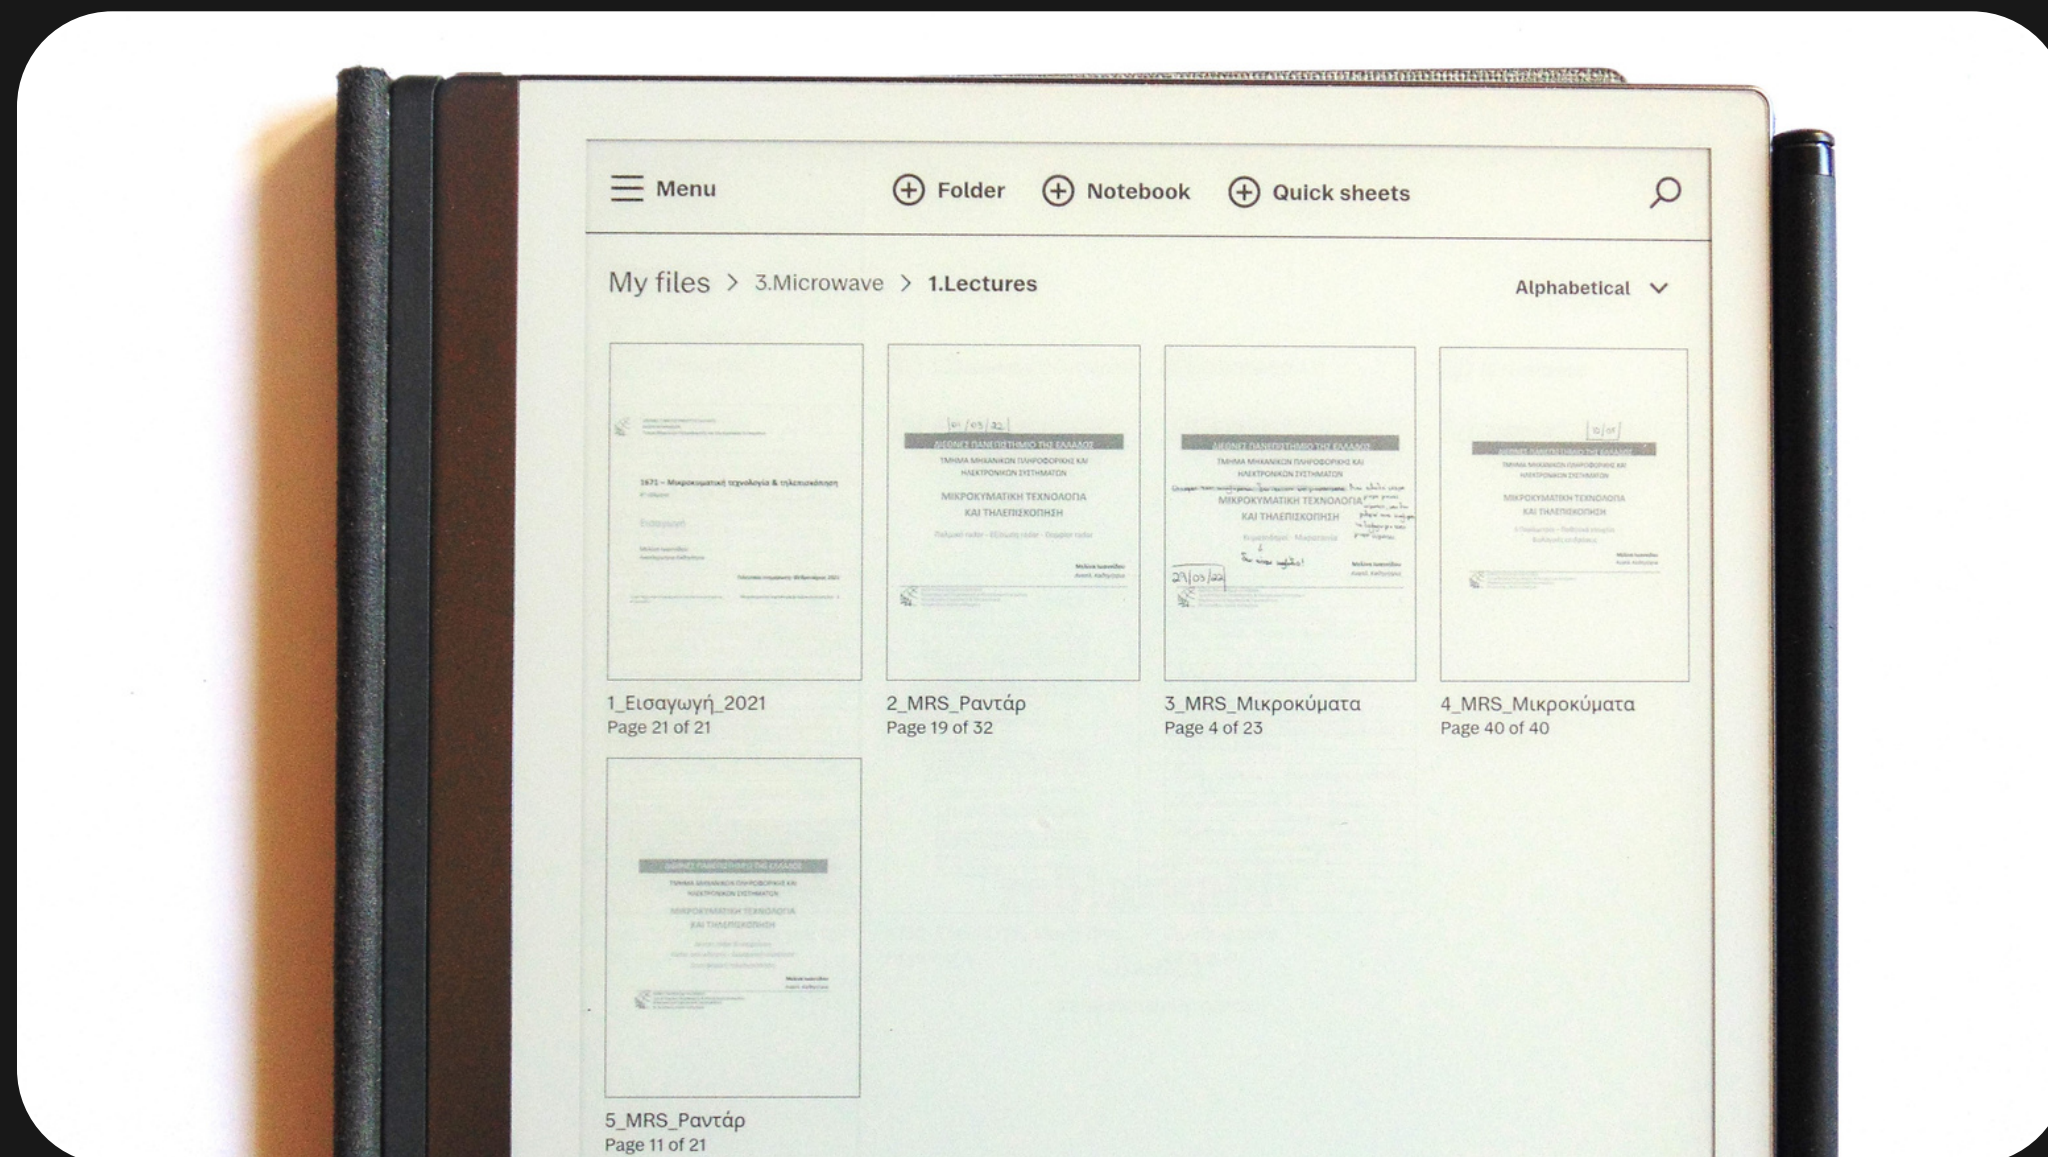

How do I take notes at UNI

As mentioned above, I sync everything on Remarkable from Google Drive. Yes! Remarkable has a feature for Google Drive, One Drive, and Dropbox. It works great for me because I have everything on Google Drive, in the same structure as I have on Remarkable. With a single tap you can take everything you need from Google Drive and save it anywhere you want on Remarkable:

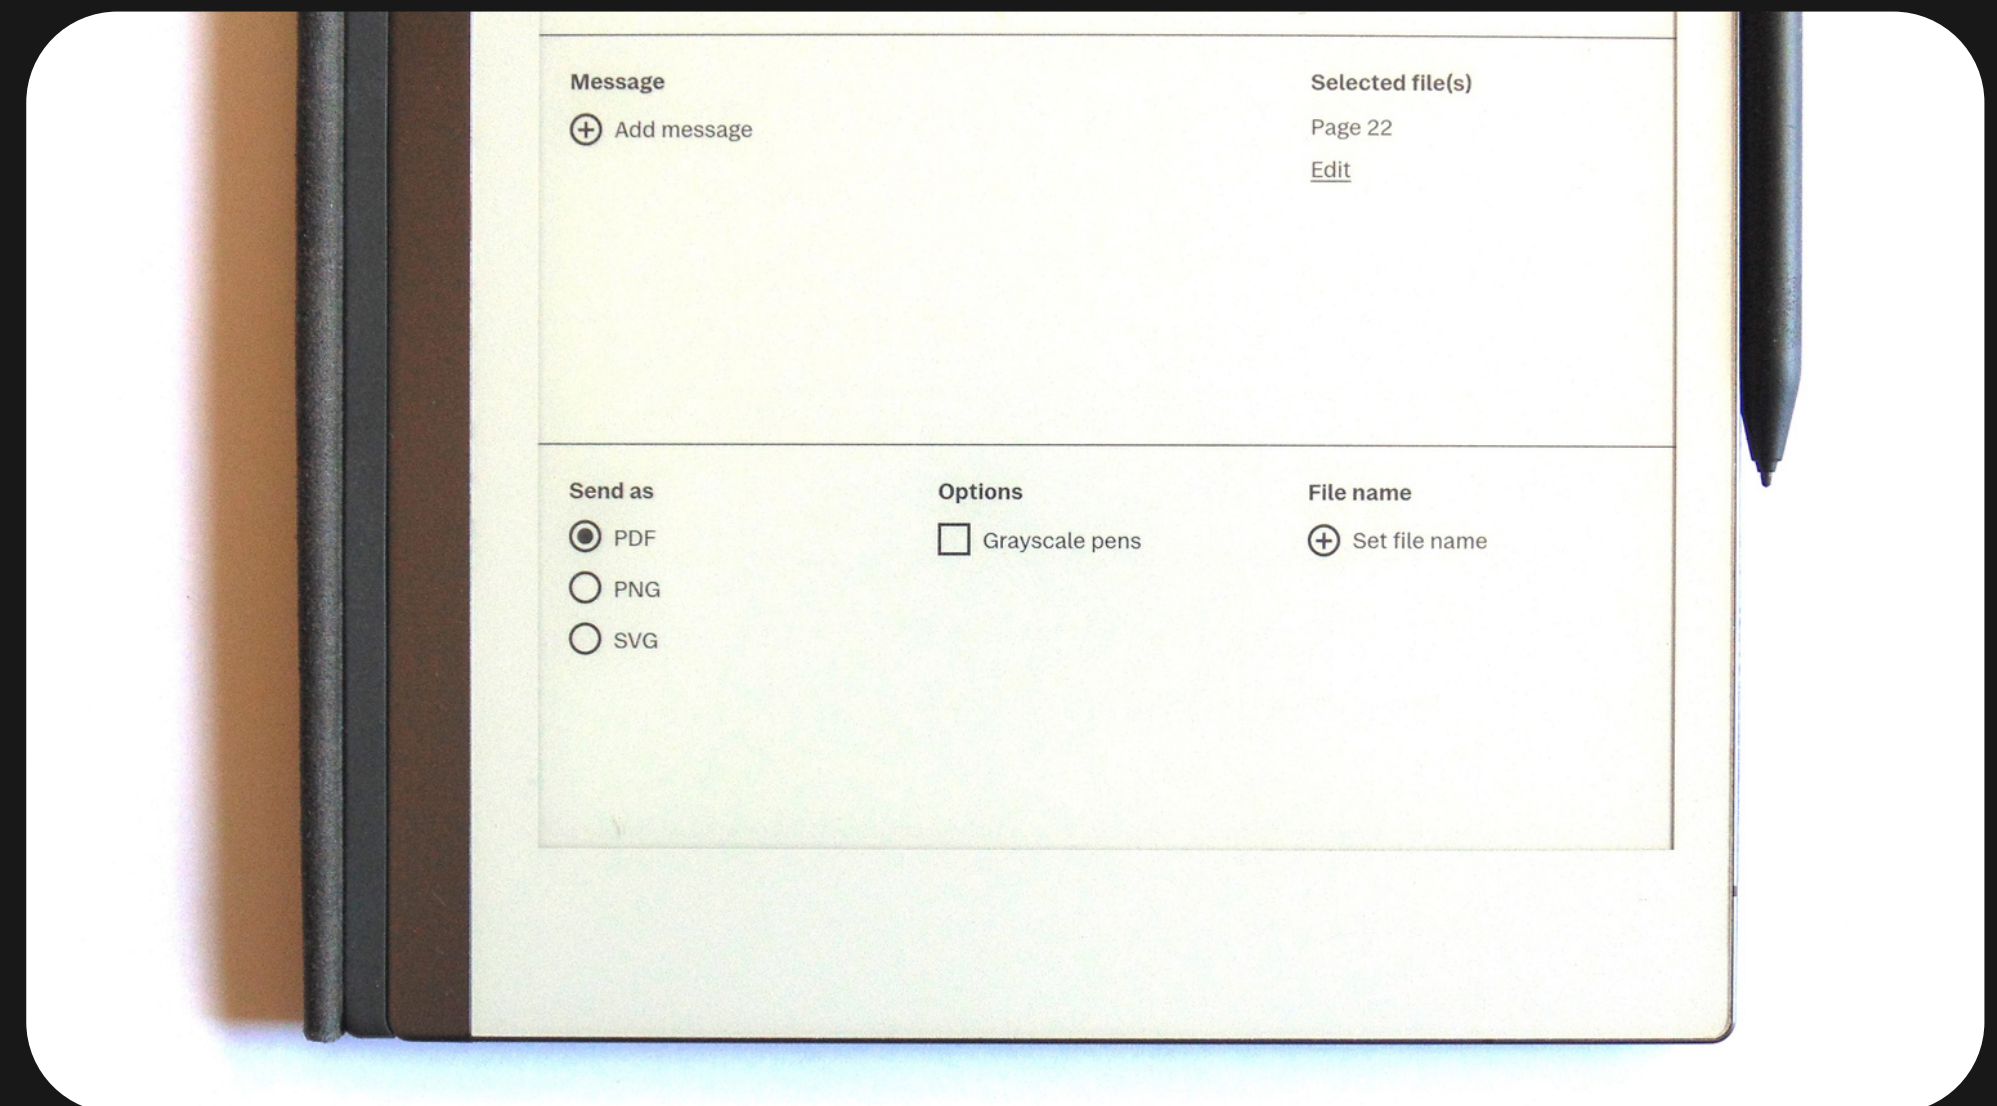

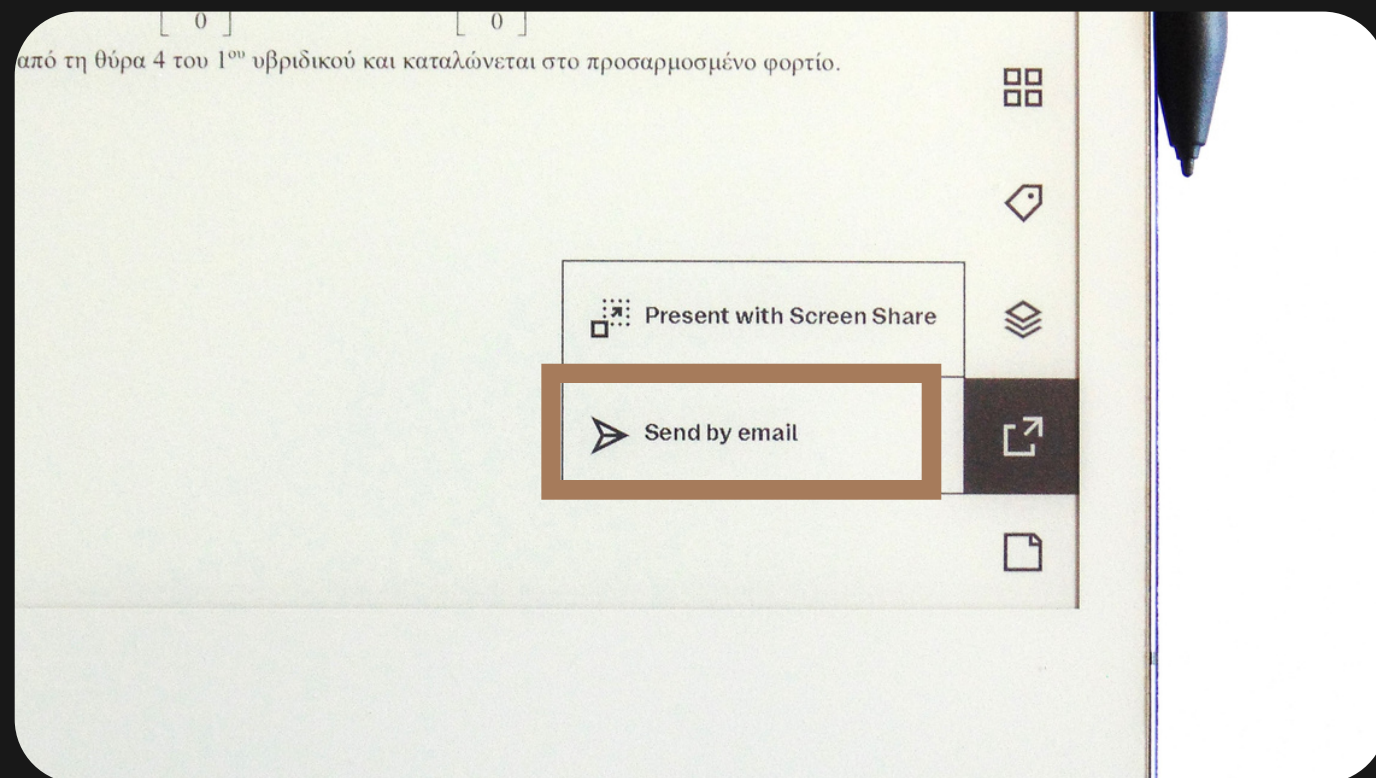

How do I take notes at UNI

You can see here that I have my lectures and my notes. It depends on the teacher which one will I use, but I can add in the lecture a new blank paper so I can take my notes there:

Send my notes easy and fast

The fun part isn't when you take notes, but when you want to share easy and fast. When I finish the subject I can just share my notes with a tap on the screen:

Thank you!
